

# How Technical Capabilities Enable the Metrics You Need

The table below shows the direct relationship between what DataShield Insight and DataShield Analytics deliver technically and which security metrics that capability enables.

| Technical Capability              | DataShield Component             | Security Metric Enabled                            |
|-----------------------------------|----------------------------------|--|
| Real-time device discovery        | DataShield Insight Sensor        | Endpoint Detection Coverage                        |
| Software version visibility       | DataShield Analytics             | Patch Compliance Rate                              |
| Vulnerability correlation         | DataShield Analytics             | Critical Vulnerabilities Open and Remediation Time |
| Behavioral analysis               | DataShield Analytics AI Engine   | Incident Volume                                    |
| Authentication traffic monitoring | DataShield Insight and Analytics | MFA Coverage and Privileged Account Review         |
| Credential pattern detection      | DataShield Analytics             | Phishing and Credential Compromise Indicators      |
| Network activity insights         | DataShield Analytics             | Workforce Preparedness context                     |
